Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

XX
CC
     AAY68642-70 represent the amino acid sequences of the fiber proteins of
CC
     Adenovirus serotypes 8, 9, 13, 14, 20, 23, 24, 25, 27, 28, 29, 30, 32,
CC
     33, 34, 35, 36, 37, 38, 39, 42, 43, 44, 45, 46, 47, 48, 49 and 51. The
     proteins are used in the course of the invention to construct chimaeric
CC
CC
     adenoviruses with reduced antigenicity. The chimaeric adenoviruses
CC
     comprise at least part of a fiber protein of an adenovirus serotype
     providing the chimaeric virus with a desired host range and at least part
CC
     of a penton or hexon protein from another, less antigenic, serotype. The
CC
     chimaeric adenoviruses are useful for gene therapy, especially where
CC
CC
     repeated delivery is required. Adenoviruses of the invention are useful
     can be constructed to have a desired host range and a diminished
CC
CC
     capability to raise neutralizing antibodies, an absence of, or decreased
CC
     infection of, antigen presenting cells of the immune system (e.g.
CC
     macrophages), and an ability to escape trapping in the liver through
CC
     increased target cell specificity. (Updated on 12-SEP-2003 to standardise
CC
     OS field)
